Driving the Creation
of Knowledge

vSolution Cynap™ Core:
Collaboration & wireless presentation.

Core essentials for collaboration & wireless presentation!

Cynap Core provides the core essential features you need for effective collaboration, and wireless presentation. With the same user-friendly technology, high performance processing, and enterprise-grade security features you'll find throughout our product line, with Cynap Core we've engineered a powerful, compact, and easy to use collaboration system - the perfect solution for classrooms, meeting rooms, and huddle spaces everywhere. For larger active learning classrooms and collaboration spaces where multiple workstations are required, multiple Cynap and Cynap Core systems can be integrated into network infrastructure using our vSolution MATRIX feature pack, providing a truly scalable, high performance AV over IP collaborative working and learning environment.

App-free, dongle-free screen sharing!

Simply connect and share your screen using the wireless technology that's built into your own mobile device. Our wireless BYOD (bring your own device) solution suits all iOS, Android, Windows and Mac devices - with full support for AirPlay, Chromecast, and Miracast screen mirroring. You can even control your Windows laptop via a touch monitor using the convenient Touchback feature.

Capture your big ideas!

It's easy to create extra content material using our built-in digital whiteboard and annotation features, and multiple users can annotate on-screen at the same time if required.

Display & share your files easily

Access, display, and share your data on-screen easily from cloud, network drives or mobile devices – even your laptop is no longer essential – just bring your content on a USB stick, or download it directly from the cloud!
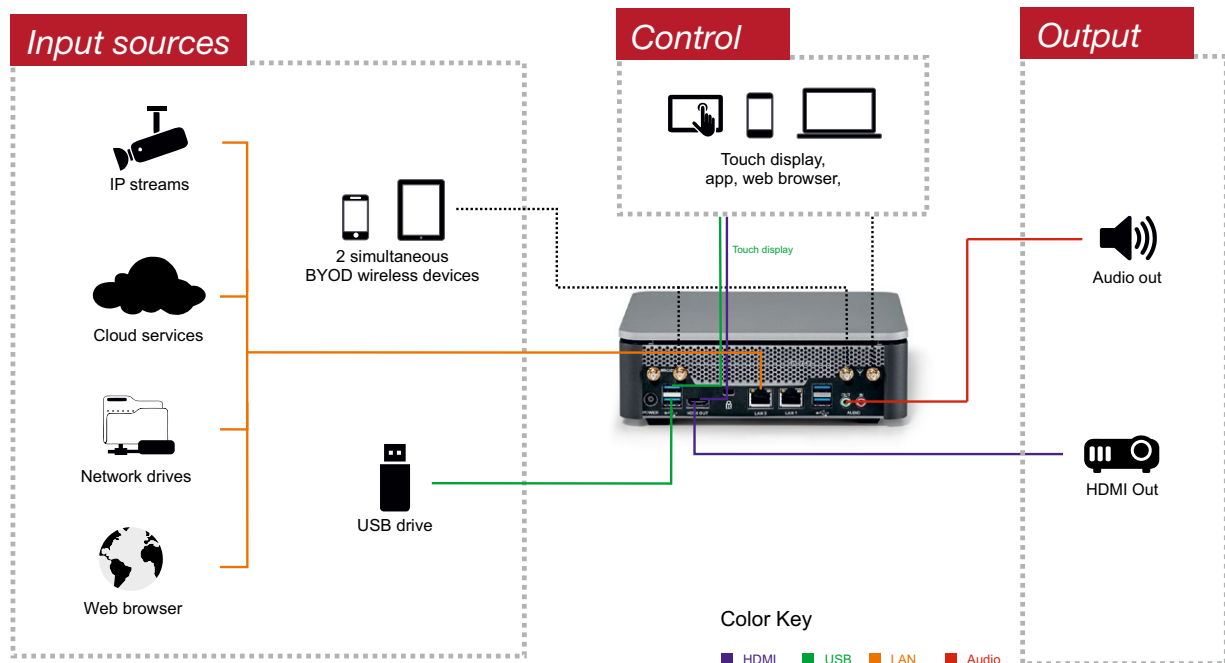

Office 365 Feature Pack

The optional Office 365 Feature Pack provides access via Cynap Core to popular Office 365 apps such as Word, PowerPoint, Excel, Outlook, and OneNote (active Office 365 account required). All your files are easy to open, work on collaboratively, and share with teammates. *Note: Skype for Business client not included.*
